

# AUTOMATE™

## Pulse 2 LinQ Tool

This utility is provided to help Integrators and Installers set up and test an Automate pulse hub and motor system prior to connecting to 3rd party control.

**COMPATIBLE PLATFORMS**  
Works with Windows and MAC  
Operations System

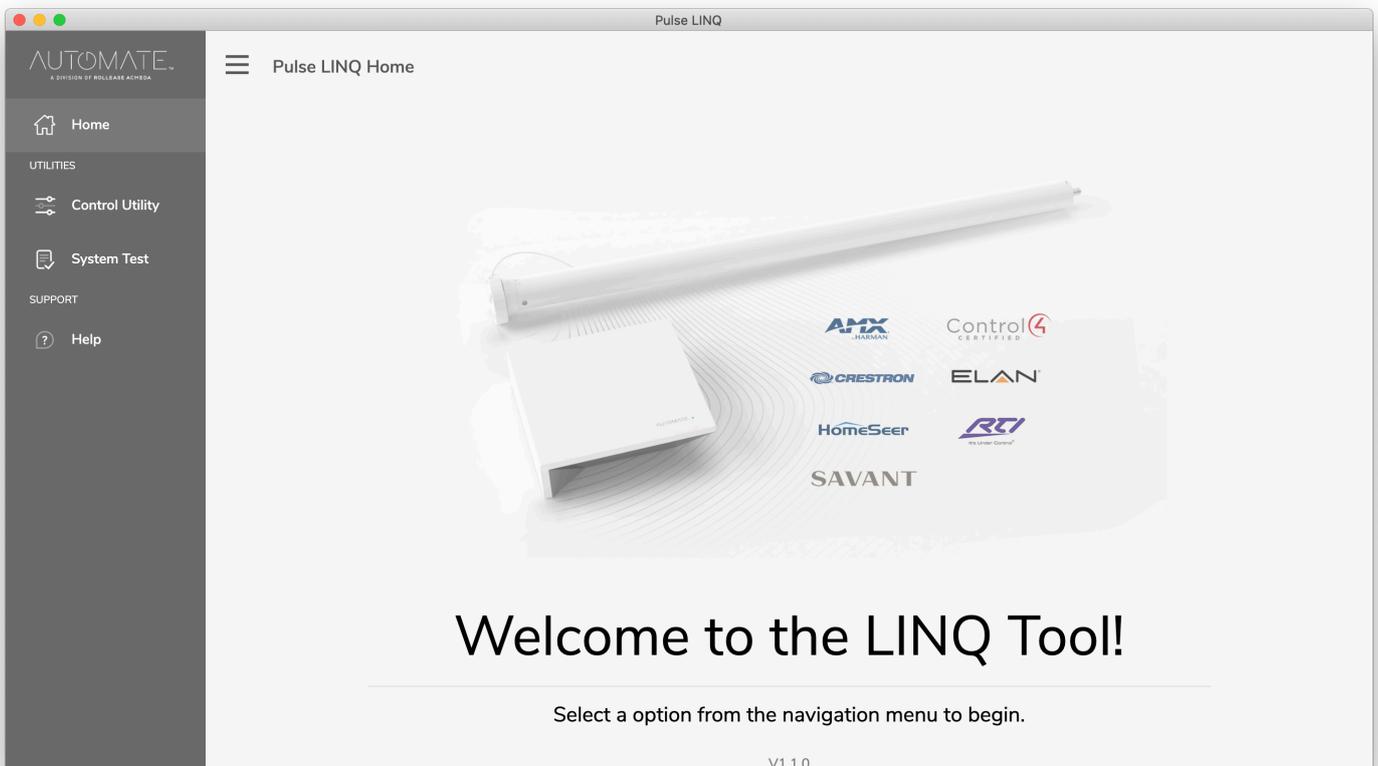

**MOTOR LOGS**  
Get the motor response log from the  
tool and troubleshoot your installation

**AUTO HUB SCAN**  
Find all the hubs connected on your  
network and test every motor easily.

**SIMPLE CONFIGURATION**  
Change your motor's configuration  
and get them ready to connect to your  
Home Automation System

ARC™ (Automate Radio Communication) is Rollease Acmeda's proprietary technology utilizing 433MHz radio communication with bi-directional feedback that brings Automate motorized shading systems together.

| <b>Features</b>         | Single motor control / Discrete commands<br>Motor logs / Auto motor scan |

## Screen Overview

The LinQ application is a powerful tool that was designed to allow you to send commands to motors and troubleshoot communication issues in an easy way. It is recommended to be used before being connecting to a Home Automation . From the Home screen, you can select the control Utility menu from the sidebar and press the "Connect button". Automatically, the LinQ tool will auto-discover all the motors previously paired with your Hub's through the Pulse 2 App. (hubs must be on the same LAN as the computer running the application).

Using the tool, you can also easily control and configure your shades, sending commands to any motor(s) desired. In addition, you can use the discrete commands for changing the motor configuration through the "Text Command" box and including save the logs for reporting and analyzing each motor response.

## WORKS WITH

- Windows 10 and MAC Operating Systems
